PREMIUM E-LIQUID

E-Liquid is comprised of 4 ingredients: Propylene Glycol (PG), Vegetable Glycerin (VG), Flavoring, and Nicotine. Let's take a closer look.

PROPYLENE GLYCOL (PG)

Propylene Glycol keeps things moist. That's a good thing when it comes to the kind of hit it can deliver. It offers a strong, pleasing hit to the back of your throat, much like tobacco does. The propylene on its own offers no taste, so it won't interfere with the flavors of your liquid.

VEGETABLE GLYCERIN (VG)

Vegetable Glycerin is much thicker. VG is responsible for creating the large clouds and is soft on the throat. It is also used in food and cosmetic products. Max VG liquids like our The Cloud Company line, have a higher VG to PG ratio in order to produce larger clouds upon exhale.

FLAVORING

Flavoring is just that, flavor. It is a food grade product that creates the wonderful taste of the overall liquid you vape. There are literally flavors of all kinds. From fruits to candy, cream to bacon, there is a flavor for everyone! Our liquid is known for it's one of a kind flavor. Especially Mother's Milk!

NICOTINE

Nicotine is extracted from tobacco leaves. It is available in different levels. The level of nicotine you choose is based on your taste and nicotine needs. The most popular level is usually 3 mg. Some of our liquids go up to 18 mg.
